

HTML Bookmarks Page Notes

1. Introduction

This HTML document creates a simple webpage containing categorized bookmarks for quick access.

2. Code Structure

The code follows a basic structure of an HTML document:

a. Boilerplate Code

- `<!DOCTYPE html>` → Declares the document type as HTML5.
- `<html lang="en">` → Defines the language as English.
- `<head>` → Contains metadata like character encoding (UTF-8) and viewport settings.
- `<title>` → Sets the title of the webpage (appears in the browser tab).

b. Body Content

The `<body>` contains two sections:

Primary Bookmarks

- **Google** → `GOOGLE`
- **Wikipedia** → `WIKIPEDIA`
- **ChatGPT** → `CHAT-GPT`

Secondary Bookmarks

- **LeetCode** → `LEETCODE`
- **PW Skills** → `PW-SKILLS`

3. Improvements & Enhancements

a. Adding Styling (CSS)

To make it visually appealing, you can add CSS:

```
<style>
```

```
body {
```

```
  font-family: Arial, sans-serif;
```

```
  text-align: center;
```

```
}
```

```
h1 {
```

```
  color: blue;
```

```
}
```

```
a {
```

```
text-decoration: none;  
color: darkgreen;  
font-weight: bold;  
}
```

```
</style>
```

b. Opening Links in a New Tab

Modify links with target="_blank":

```
<a href="https://www.google.co.in/" target="_blank">GOOGLE</a>
```

4. Summary

This webpage organizes useful bookmarks under primary and secondary sections, making navigation easier. Enhancements like CSS styling and opening links in new tabs can improve the user experience.
